Lab 5 Writeup
24 November 2014

I collaborated with Arjun Narayanan.

Design Decisions:
      For selectivity estimation, I used the histogram approach that is outlined in the lab handout. I did not make any changes to the API.

Work:
      I worked on this lab for 8 hours. I initially found the histogram creation to be difficult to implement code-wise, because I kept getting confused about whether I should be working with integers or floats, but I realized through the test cases that I probably want to work with more accuracy than afforded by integers.
